The right chromatograph is going to cost you less

Isco chromatographs offer top value. An Isco single-pump ternary or dual-pump binary gradient system complete with IBM computer can give you greater performance and capability than the two top-selling systems that cost much more. You'll get great value with any Isco HPLC system: analytical, microbore, or prep; stainless or inert.

With top performance. An Isco system gives you a precision pump that can be programmed to change flow rate based on either time or volume delivered. A sensitive, stable 190-to-750 nm detector with flow cells down to 0.12 μL. And a complete, powerful data management system that is actually easier to use than many simple integrators found in other chromatographs.

And top reliability. We've made over 50,000 detectors, pumps, and related instruments to earn our reputation for dependability. We back it up with the best system warranty offered anywhere—three years parts and labor.

Find out how much value Isco gives you by sending for a comparison of the leading HPLC systems. We'll also include our 80-page general catalog and 48-page HPLC catalog. Call toll free (800) 228-6250 (except NE, AK) or write: Isco, Inc., P.O. Box 5347, Lincoln, NE 68505.

ONE DROP AT A TIME WITH…

• pH Electrodes
• Tabletop Ultracentrifuge
• Biomek™ 1000 Workstation
• System Gold HPLC

A few microliters.
That’s all the sample it takes to get from separation to final answer with Beckman’s across-the-board Microanalysis Capabilities.

Only Beckman provides a full range of instrumentation to handle precious samples with easy recovery, time after time.

Start with our pH Electrodes that measure samples as small as 100 μL accurately, optimizing all phases of biochemical analyses.

For isolation of cell components and macromolecules, Beckman’s Tabletop Ultracentrifuge uses small samples to prepare subcellular fractions in minutes, and to separate plasmid DNA in as little as five hours.

For microplate immunoassays, the Biomek™ 1000 Workstation automates sample handling from pipetting through optical density analysis and allows further sample manipulation — automatically — when positive wells are identified.

Our new System Gold Personal™ Chromatograph and HPLC columns permit the purification and analysis of pico-to femtomolar quantities of biological materials with excellent recovery of mass and activity.

For radioactive analysis, Beckman’s advanced Liquid Scintillation System provides accurate measurement of DPM activity in a microfuge tube using as little as 200 μL of sample/cocktail, saving preparation time and disposal costs.

And finally, our UV-Visible Spectroscopy Systems give accurate measurements of nucleic acids and proteins using less than 50 μL. Samples are recoverable for further experimentation.

Final answers are more quickly available with our new full line of Enhanced Software for a variety of demanding applications.

And our family of equipment is configurable to your requirements. Accessories interchange in seconds, and all necessary reagents and supplies are readily available.

Microanalysis the Beckman way saves not only your precious samples, but precious time and money as well. On the job, you get rapid and accurate analysis. And when it’s time to order, just pick up your phone for rapid delivery.

Beckman also delivers peace of mind. Our commitment to the scientific community for over half a century is reflected in our instrument design, and in our worldwide support system designed for fast response to your service and technical needs.

From smaller sample sizes to a broader choice of equipment and supplies, Beckman is with you every step of the way in microanalysis. 2. Biotechnological aspects of protein production by cultured cells (Prague, July 18-20)
3. 21st century prospects of biotechnology in agriculture and environment (Slusovice, July 18-20)
4. 10th symposium on biology, biochemistry, and clinical biochemistry of lectins (Prague, July 18-20)

#### Fellowships for Young Biochemists

IUB and the Organizing Committee will make a number of awards to assist young biochemists to attend the Congress. Preference will be given to residents of countries where biochemistry is in the early stages of development. Details will be published in TIBS and other biochemical journals. Information can be obtained from the Acting General Secretary of IUB, Dr. R. L. Hill, Department of Biochemistry, Duke University Medical Center, Durham, NC 27710, USA.

Address inquiries to 14th International Congress of Biochemistry, 166 50 Prague 6, Czechoslovakia.
