COVER: Three-dimensional structure of bovine pancreatic ribonuclease A, the
molecular evolution of its amino acid sequence. The one-letter amino acid
codes of the sequence are shown on the string of spheres that surrounds the
clockwise from the amino to the carboxyl terminus. The spheres are
color-coded by the physical type of the amino acid side chain. The drawing
was produced by J. Cammas, B. Lee, and I. Paset, Laboratory of Molecular Biology,
National Cancer Institute, using a crystal structure of the protein molecule and the
computer program RIBBONS and GEMM.

Designed to report on rapidly changing developments in biological sciences, The
FASEB Journal publishes brief, definitive, original research communications and
state-of-the-art reviews, as well as editorials, letters, a book list, news items, a calendar,
and public affairs. The views expressed in articles are those of the authors and
not necessarily those of the Federation. All manuscripts are subject to review and
approval by the Editors before publication. Copyright © 1988 by the Federation
