CHEMICAL ARROWS FOR ENZYMATIC TARGETS

Also in this issue: PHS, NSAIDs, and colon cancer
Canalicular bile acid transport • Human cytosolic sulfotransferases
Heritable diseases of the skeleton • Sialic acid binding ligands

Official Publication of the Federation of American Societies for Experimental Biology
March 1997, Volume 11, Number 4
PROTEIN-BASED MATERIALS

This volume provides a comprehensive review of protein-based materials systems written from a materials science perspective. The book is divided into three sections. The first section reviews the chemical and biological approaches to this unique class of materials. The second includes detailed introductions to the key classes of protein materials — silks, protein composites and elastomeric and adhesive proteins. The final section covers processing issues including liquid crystal phase formation, the spinning of protein fibers, formation of protein-based films and coatings, and self-organizing protein systems.

M. W. VOGEL, University of Frankfurt, Germany, and W. R. WOHLFARTH, Thomas Jefferson University, Philadelphia, PA (eds.)

DRUG DISCOVERY AND EVALUATION

Pharmacological Assays

This laboratory manual is an invaluable resource for anyone testing the pharmacological effects of newly developed drugs. Reliable standard assays for all therapeutic indications — such as analgesic, psychotropic, cardiovascular, respiratory, renal, and immunomodulatory activities — are presented in a clear and logical structure. Each assay contains a detailed protocol that includes exact quantities, reagents and preparations, giving the purpose and rational of each assay as well as a critical assessment of its value and relevance. It will be easy to select and perform the appropriate tests for discovering and evaluating new drugs with this comprehensive manual.

COMPREHENSIVE HUMAN PHYSIOLOGY

From Cellular Mechanisms to Integration

Comprehensive Human Physiology is a significantly important new book in the field of physiology, presenting state-of-the-art knowledge about both the molecular mechanisms and the integrative regulation of body functions. It is the quintessential reference work in the fields of physiology and pathophysiology, essential reading for researchers, lecturers and advanced students in biomedicine.

For more information, point your web browser to the Comprehensive Human Physiology page at the Springer website: http://www.springer-nj.com/biology/

C. NEWTON and A. GRAHAM, Zeneca Pharmaceuticals

PCR
Second Edition

This comprehensively updated and revised edition of the best-selling PCR is designed as an introduction to the technique and provides authoritative coverage of a wide range of current applications. Topics covered include a definition of PCR; PCR instrumentation, reagents and consumables; amplifying the correct product; cloning and modification of PCR products; isolation and construction of DNA clones; PCR mutagenesis; sequencing PCR products; new sequence determination and genome mapping; fingerprinting; characterizing unknown mutations; analysis of known mutations; detecting pathogens; and quantitative PCR.

1997/APPROX. 208 PP./SOFTCOVER $34.95 (TENTATIVE) ISBN 0-387-91506-0 INTRODUCTION TO BIOTECHNIQUES - BIOS

J.A. HARRISON, University of Sheffield, UK, and J.M. GRAHAM, Merseyside Innovation Center, Liverpool, UK

MEMBRANE ANALYSIS

This volume provides an introduction to the basic principles and the methods used to prepare biological membranes for analysis of their molecular composition and structure. The book also covers the methodology associated with the dissection of membrane trafficking. In addition, the choice of biological material and technique is often crucial and Membrane Analysis provides expert guidance on the most appropriate method for the job. Topics covered include the source of membranes, preparation of subcellular membranes, molecular composition, structural organization of membrane proteins and glycoproteins, structural organization of membrane lipids and glycolipids, membrane assembly and protein targeting, membrane transport and secretion, and receptor-mediated endocytosis and membrane trafficking.

1997/APPROX. 176 PP., 75 ILLUS., 10 TABLES SOFTCOVER $34.95 (TENTATIVE) ISBN 0-387-91507-9 INTRODUCTION TO BIOTECHNIQUES - BIOS

Springer-Verlag New York is pleased to announce that it is now the distributor of BIOS titles published in 1997 and thereafter, including the series Instant Notes, Introduction to Biotechniques, Medical Perspectives, Microscopy Handbooks and selected individual titles.

SYNTHETIC BIODEGRADABLE POLYMER SCAFFOLDS

Tissue engineering is an exciting new field in which engineers, physical and life scientists and physicians are working together to create new tissues from cells and synthetic matrices. The use of biodegradable polymers as synthetic extracellular matrices may allow completely natural tissues to be created which can be utilized to replace tissues lost to disease or trauma. These new tissues may also provide valuable model systems to study the processes of normal and abnormal development. This volume reviews the synthesis and properties of biodegradable polymers utilized in tissue engineering, the applications of these matrices to engineer a variety of tissue types, and relevant FDA and patent issues. It will be an invaluable reference for engineers, scientists, and clinicians as they seek guidance on potential new materials or applications in the tissue engineering field.

1997/APPROX. 354 PP./HARDCOVER $95.00 (TENTATIVE) ISBN 0-441-81740-5 TISSUE ENGINEERING - BRINHAUSER

GENE QUANTIFICATION

Gene quantification provides an accurate estimation of DNA and RNA targets. Quantitating nucleic acids is becoming increasingly instrumental for a number of applications in basic research and clinical settings. One of the more prominent methodologies used to quantitate genes is Polymerase Chain Reaction (PCR). A range of new techniques is currently being developed for quantitative gene amplification as well as for quantitative gene detection. This book provides a complete, up-to-date review of the methodologies and applications of gene quantitation. In addition, the latest developments in the technologies for gene quantitation are discussed. This book will be a welcome addition to any laboratory — academic, industrial, or clinical — involved in biological, medical, or biochemical research or in pharmaceutical, biotechnological, or clinical applications.

1997/APPROX. 400 PP./HARDCOVER $95.00 (TENTATIVE) ISBN 0-441-817-20-4 APPLIED BIOMEDICAL TECHNOLOGIES - BRINHAUSER

Four Easy Ways to Order:

CALL Toll-Free 1-800-SPRINGER, 8:30 A.M.—5:30 P.M. ET, FAX 201-348-4500. Please mention 5105 when ordering by phone. ** Send a message over the INTERNET to orders@springer-ny.com. ** WRITE to Springer-Verlag New York, Inc., Order Dept. 5105, PO Box 2485, Secaucus, NJ 07096-2485. ** VISIT your local scientific bookstore or urge your librarian to order for your department. ** Payment may be made by check, purchase order or credit card. Please enclose $3.00 for shipping (add $1.00 for each additional book) & add appropriate sales tax if you reside in CA, IL, MA, MO, NJ, NY, PA, TX, VA, and VT. ** Canadian residents please add 7% GST. ** Remember ... your 30-day return privilege is always guaranteed! ** Prices subject to change without notice. 3/97 REFERENCE 5105
Let’s get right to the point. When it comes to small animal research, Millar MIKRO-TIP® technology has rewritten the book. To further enhance the value of our revolutionary 1.4 F pressure transducers for mice, we’ve added impedance electrodes to provide the smallest pressure-volume device available.

- Ultraminiature pressure sensor and flexible nylon catheter minimally obstruct small vessels and valves.
- Frequency response: flat to 10kHz - high fidelity pressure measurement at the source.
- No artifact or damping of signal.
- Easy to use, inexpensive interface units let you use existing recording/monitoring equipment.
- No debubbling or flushing required.
- Advanced sensor design for improved durability.

For complete specifications on pressure or pressure-volume models for mice, please contact a MILLAR customer service representative.

See our complete line of catheter-tip transducers for pressure, velocity and volume at EB’97 Booth #556.
For 65 years, Annual Reviews publications have been consistently rated at the top of their respective scientific fields. Thousands of scientists worldwide turn to Annual Reviews as a highly regarded resource for keeping up to date on the latest research trends.

**ANNUAL REVIEW OF BIOCHEMISTRY**
Editor: Charles C. Richardson  
Assoc. Editors: John N. Abelson, Christian R.H. Raetz  
Volume 66 (available July 1997) $68 USA / $74 Foreign  
Volume 65 (1996) $59 USA / $65 Foreign

**ANNUAL REVIEW OF BIOPHYSICS AND BIOMOLECULAR STRUCTURE**
Editor: Robert M. Stroud  
Assoc. Editors: Wayne L. Hubbell, Wilma K. Olson, Michael P. Sheetz  
Volume 26 (available June 1997) $70 USA / $75 Foreign  
Volume 25 (1996) $67 USA / $72 Foreign

**ANNUAL REVIEW OF CELL AND DEVELOPMENTAL BIOLOGY**
Editor: James A. Spudich  
Assoc. Editors: John Gerhart, Steven L. McKnight, Randy Schekman  
Volume 13 (available Nov. 1997) $64 USA / $69 Foreign  
Volume 12 (1996) $56 USA / $61 Foreign

**ANNUAL REVIEW OF GENETICS**
Editor: Allan Campbell  
Assoc. Editors: Wyatt Anderson, Elizabeth W. Jones  
Volume 31 (available Dec. 1997) $60 USA / $65 Foreign  
Volume 30 (1996) $52 USA / $57 Foreign

Fear Conditioning System
- user defined stimulus presentation
- comprehensive graphical analysis

MULTI-CHANNEL TELEMETRY
- transmission ranges from 2m upwards
- multiple frequencies for group studies

Operant Behaviour Systems
- custom configuration with pellet feeders or liquid dippers
- large & small boxes

Non-Invasive Blood Pressure Monitor
- simultaneous monitoring in up to 16 channels

Pulmosys
- Pulmonary Function Analyzer
- calculate 20 pulmonary parameters with 2 measuring signals

Systems for Isolated Organs
- fully automated
- isotonic or isometric transducers
- computerized data acquisition & analysis

Computerized Animal Respirator
- featuring different ventilation modes (incl. constant pressure ventilation)

Stereotaxic Instruments
- for large and small animals
- We also supply micromanipulators for all physiological applications
Purdue University

Walther Professor of Nutrition and Cancer

The Department of Foods and Nutrition at Purdue University, in collaboration with the Purdue Cancer Center, and with the support of the Walther Cancer Institute, is seeking a nationally recognized scientist to fill a new position in the area of nutrition and cancer, preferably carcinogenesis or chemoprevention. The position offers an opportunity to expand a strong research program through collaborations with more than 100 campus scientists currently engaged in basic cancer research who possess expertise in biological, biochemical and chemical sciences, engineering, pharmacology, veterinary medicine and nutrition. The successful candidate will have an appointment in the Department of Foods and Nutrition, but will be closely affiliated with the Purdue Cancer Center (a National Cancer Institute designated basic laboratory research center since 1978 housing programs in experimental therapeutics and diagnostics, structural biology, cell growth and differentiation and carcinogenesis). The position will be available July 1, 1997.

The successful candidate is expected to qualify for the rank of FULL PROFESSOR. He/she will have a PhD, DVM or MD degree with a distinguished track record in research as measured by extramural research funding, peer-reviewed publications and evidence of productive collaborative research activities. Teaching experience is also desirable. There are no clinical practice responsibilities. A highly competitive salary and benefits package is available.

An application should include a description of interest outlining current and planned research and scholarly activities, three representative reprints, curriculum vitae and addresses and telephone numbers of three references. The review of applications will begin on January 1, 1997 and will continue until the position is filled. Send materials to:

Richard Mattes, PhD, RD or William Baird, PhD
Co-Chairs, Search Committee
Purdue University
Department of Foods and Nutrition
Stone Hall, Room 209
West Lafayette, IN 47907-1264

Purdue University provides the resources and amenities of a big ten university in a setting that offers a high quality of life. Purdue is an Equal Opportunity, Affirmative Action Employer.

NORTH SHORE UNIVERSITY HOSPITAL

Research Faculty-Cell Biology

The Department of Pediatrics, North Shore University Hospital-Long Island Children's Hospital seeks a full-time faculty research scientist (Ph.D. or M.D.-Ph.D.) with experience and special interest in the field of signal transduction.

Applicants must qualify for appointment to Research Associate Professor of Pediatrics at NYU School of Medicine, Department of Cell Biology. This NIH funded position demands experience in cellular physiology, biochemistry, cell culture and molecular biology techniques. The position involves important roles in two NIH funded projects, one dealing with PKC-CAMP Signal Cross-talk and the other with Insulin-IRS-1 Signaling. The ability and desire to function as an independent investigator is mandatory, as the successful candidate will become Co-PI on one project and Co-Investigator on the other. Both projects involve supervision of other faculty and support personnel. Participation in long-range planning for the laboratory will require focus, creativity and innovation. Good interpersonal and communication skills are likewise important. Competitive salary will be commensurate with experience and the level of faculty appointment in the Departments of Pediatrics and Cell Biology, NYU School of Medicine.

Interested individuals should send a resume and reference list to: Stanley E. Fisher, M.D., Professor of Pediatrics and Cell Biology, Room 138, Boas-Marks Biomedical Sciences Research Center, North Shore University Hospital-Long Island Children's Hospital, 200 Community Drive, Manhasset, NY 11030. E-mail: sfisher@nashhs.edu; Fax: (516) 562-2496
