ANGIOGENESIS AND CHRONIC INFLAMMATION

Also in this issue: Transcription of bovine steroid hydroxylase genes
The tetraspanin superfamily • D-amino acids in immune phenomena
p53 function and molecular archeology • (PAPS) and sulfation

Official Publication of the Federation of American Societies for Experimental Biology
May 1997, Volume 11, Number 6
Here are some very simple but important reasons why you should...

- Everything is quick and within easy reach.
- Sections are fully browsable and searchable
- Full text of articles going back to October, 1996.
- Tables of Contents are for past, current, and advance areas.
- Rich color and sharp resolutions of diagrams.
- Access to the Medline database of abstracts.

And, as if that's not enough...access is now FREE on a trial basis (Trial period extended to the fall of 1997.)
Let's get right to the point. When it comes to small animal research, Millar MIKRO-TIP® technology has rewritten the book. To further enhance the value of our revolutionary 1.4 F pressure transducers for mice, we've added impedance electrodes to provide the smallest pressure-volume device available.

- Ultraminiature pressure sensor and flexible nylon catheter minimally obstruct small vessels and valves.
- Frequency response: flat to 10kHz - high fidelity pressure measurement at the source.
- No artifact or damping of signal.
- Easy to use, inexpensive interface units let you use existing recording/monitoring equipment.
- No debubbling or flushing required.
- Advanced sensor design for improved durability.

For complete specifications on pressure or pressure-volume models for mice, please contact a MILLAR customer service representative.

See our complete line of catheter-tip transducers for pressure, velocity and volume at EB'97 Booth #556.

ANIMAL VENTILATOR
Advanced Design, Universal Application

* One ventilator for mice, rats, rabbits and dogs
* Graphite piston in glass cylinder, does not require lubrication. Powered by stepping motor.
* Tidal volume adjustable from 0.05ml to 100 ml
* Respiration frequency: 5 to 200 BPM
* Wide range inspiration/expiration times (1/4 to 4/1)
* PEEP (Positive End Expiratory Pressure) capability
* Airway pressure safety and alarm capability
* RS-232 Interface allows remote control by computer

The 1998 Miami Nature Biotechnology Winter Symposium
Molecular Biology in the Conquest of Disease
February 7-11, 1998, Miami, Florida USA

Functional Genomics
Bioinformatics
Genetic Analysis of Complex Diseases
Degenerative Processes
Therapeutic Strategies

Sponsored by The University of Miami and Nature Publishing Company
Organized by the University Biochemistry & Molecular Biology Foundation, Inc.
and Nature Biotechnology

Major sponsors
Boehringer Mannheim Biochemicals
Coulter Corporation
Warner-Lambert, Parke-Davis Pharmaceuticals

This is a CME credit activity of the University of Miami School of Medicine

The final program will be available in July 1997. If you wish to receive a copy, please contact the Symposium.
