At Last! 
A Smart Chart Recorder.

The M-3000 Signal Processing Center combines data capture and computer analysis in a single, powerful, microcomputer based system. Both waveform data and processed values are presented simultaneously on the same document, either during or after the experiment. Acquisition, analysis and control are handled by XYZ, a unique spreadsheet program that allows researchers to customize protocols for each experiment with no programming. These features offer the medical researcher:

- Reduction in Project Development Time by 40% to 50%
- Elimination of repetitious calculations
- Ability to observe trends as they occur
- Easy interpretation of integrated waveform and computed information

The system is complete with an 8 channel amplifier, high speed 8 channel A/D, high resolution color display with real time scrolling, advanced microprocessor, and digital chart recorder with 8 channel thermal print head.

The M-3000 can be used for Cardiovascular, Tissue Bath, Pulmonary, Neuro, and Other Studies.

THE MOST VERSATILE RESEARCH TOOL FOR MONITORING INTRACELLULAR FLUOROGENIC DYES

Fluoroplex III is a powerful, dual excitation research system which allows the biologist to localize and quantify concentrations during time-dependent kinetic events.

CALCIUM AND BEYOND: Not limited to only fura-2 for monitoring calcium, Fluoroplex III has the flexibility to monitor all fluorogenic dyes.

PHOTODIODE ARRAY DETECTION: Fluoroplex III offers full spectral emission display of any fluorophore. Photon counting is provided for millisecond resolution of dynamic intracellular events.

ADVANCED IMAGE ANALYSIS: Dedicated imaging hardware allows the researcher to "see" changes as they occur during dynamic biological events such as muscle contraction, cell division, fertilization, and activation.
High-speed Analytical Evaporators
MEYER N-EVAP®
Model 112, 24-position

Features:
- Mild conditions reduce sample decomposition.
- Nitrogen blow-down.
- Hot water bath.
- No sample loss by bumping.
- Handles up to 24 test tubes at a time.
- Each sample accessible from the front.
- Compact, only 14" (356mm) of hood space.
- Versatile, handles test tubes 10 to 29mm diameter.
- Simplified loading and unloading.
- High output: over 150 samples per day.
- Little maintenance required.
- Shipped completely assembled, ready to use.
- Standard accessories available.

Description:
The N-EVAP consists of an electrically heated stainless-steel water-bath container, a stainless-steel support stand, nitrogen manifold, nitrogen injectors and a sample holder. The holder will accept test tubes having a minimum diameter of 10mm. Smaller test tubes can be handled by placing them inside larger tubes in the holder. They will also accommodate test tubes with a maximum diameter of 29mm, as well as scintillation vials, 50ml Erlenmeyers or centrifuge tubes.

Operation:
Nitrogen gas (or air) is introduced into a manifold from the laboratory supply line or from a cylinder at a pressure of 1 to 8 psig. The gas flows through silicone rubber tubes to needle-valves mounted on top of 24 metal tubes. An easily removable stainless steel Luer-Lok needle is attached to the lower end of each metal tube. The gas flow to each needle is regulated separately by the needle-valves.

Solutions to be evaporated are placed in test tubes in a spring-held sample holder and are lowered into the warm water bath. The evaporation is accomplished by maintaining the individual needle tips just above the solution surface. On completion, the assembly is raised and the samples removed.

Other Models:
For greater sample output, a 36-position N-EVAP is available in addition to a lower-priced 12-position unit. An all-plastic 12-position N-EVAP is resistant to corrosion for samples containing higher concentrations of strong acids. The AQUA-VAP (6-position) is designed for the rapid evaporation of water solutions in pear-shaped flasks.

Accessories:
- A pressure-reducing regulator for use when the bench nitrogen supply is over 20 psig.
- A tube assembly with fittings for connecting the evaporators to the gas or air supply.
- Plastic anti-evaporation floats to use the N-EVAP bath to 100°C.
- Fittings and adapters to permit the use of the N-EVAPS with disposable Pasteur pipets.
- Older Model N-EVAP evaporators can be upgraded. For example, we can furnish a corrosion-resistant sample holder, support trays and a hoist assembly for the Model 112.
- All our standard Luer Lok needles supplied with the equipment are of optimal size. Other sizes and lengths available on request.
- Quiet compressors to deliver oil-free, filtered air for all N-EVAPs.
- Intrinsically safe air-purging equipment for water-bath case to NFPA specifications, when required.
- Six-position sample holder for the Model 111 N-EVAP to hold tubes 29mm to 45mm O.D.
- 230-volt heaters for water bath.

About our Firm:
Organamation Associates Inc. has been in business since 1960. We are proud of our reputation. Numerous repeat orders attest to the popularity of our equipment in analytical laboratories around the world. For further information and prices on our complete line of analytical evaporators, please contact us.
By making our online biomedical information easier to use, we’ve opened the door for more users.

You, for instance.

If you’re a physician or researcher in a medical, clinical, university, or scientific environment, our new Dialog Medical Connection™ could very well be the research tool you’ve been looking for.

Dialog is already the choice of the majority of information specialists. So you’ll be using the most sought after information available.

Now it’s easy to have fast access to the major biomedical databases like MEDLINE.

Or BIOSIS PREVIEWS, giving you worldwide coverage of research in the life sciences.

Or NEWSEARCH, one of many general reference databases providing a daily index of articles and book reviews from over 1700 of the most important newspapers, magazines and periodicals.

So it’s easy to stay well informed on virtually any topic that’s important.

Best of all, you don’t have to be an online professional to use Dialog Medical Connection. Because it offers an easy to follow menu for new users and a command mode for more experienced searchers.

There’s no reason not to have instant access to information you need when you need it. All you need is a personal computer, a modem, and Dialog Medical Connection.

Call Dialog today and ask about our special incentives for first-time users including $100 free time. 1-800-3-DIALOG. Or write Dialog Marketing, 3460 Hillview Avenue, Palo Alto, CA 94304.

Part of the world’s largest online knowledgebank.

3rd Edition!
GASTROINTESTINAL PHYSIOLOGY
Edited by Leonard R. Johnson, Ph.D.; with 3 contributors.
• contributors from all areas of gastrointestinal physiology combine their expertise to bring you the most up-to-date information available.
1985. 175 pages, 108 illustrations. (Book Code: 02547) Price, $19.95 (U.S.); $27.75 (Can.)

5th Edition!
RESPIRATORY PHYSIOLOGY
By N. Balfour Slonim, M.D., Ph.D. and Lyle Hamilton, Ph.D.
• up-to-date review of respiratory physiology
1987. 300 pages. (Book Code: 04697) Price, $20.95 (U.S.); $29.00 (Can.)

NEW!
PULMONARY PHYSIOLOGY IN CLINICAL PRACTICE: The Essentials for Patient Care and Evaluation
By Lawrence Martin, M.D., FACP, FCCP
• covers pulmonary physiology as it relates to patient care
1987. 414 pages, 222 illustrations. (Book Code: 03192) Price, $22.95 (U.S.); $31.75 (Can.)

NEW!
PDQ PHARMACOLOGY
By Gordon E. Johnson, Ph.D.
• provides a superb overview of the important basics of pharmacology
1988. Approx. 296 pages, 124 illustrations. (Book Code: 02550) Mosby distributes this publication of B.C. Decker, Inc. Price, $16.95 (U.S.); $23.50 (Can.)

5th Edition!
CARDIOVASCULAR PHYSIOLOGY
By Robert M. Berne, M.D., D.Sc.(Hon.) and Matthew N. Levy, M.D.
• remains the standard in the study of cardiovascular physiology
• provides a solid framework of the essentials in this area
1986. 270 pages, 189 illustrations. (Book Code: 00589) Price, $20.95 (U.S.); $29.00 (Can.)

NEW 2nd Edition!

PHYSIOLOGY

Edited by Robert M. Berne, M.D., D.Sc. (Hon.) and Matthew N. Levy, M.D.; with 10 contributors.

This new edition has been thoroughly reworked and enhanced to bring the latest information in an exciting straightforward style. Covering all the physiological principles, it features everything the reviewers raved about in the first edition, with major enhancements to improve student comprehension:

- hundreds of new and revised illustrations
- easy to use format that progresses from basic to advanced principles
- emphasis on important mechanisms and concepts rather than isolated facts
- state-of-the-art material in research, literature, and teaching, including topics such as the atrial natriuretic factor

1988. 1,087 pages, 1,264 illustrations. (Book Code: 01697) Price $49.95 (U.S.); $69.00 (Can.)

NEW 12th Edition!

GOTH’S MEDICAL PHARMACOLOGY

By Wesley G. Clark, Ph.D.; D. Craig Brater, M.D.; and Alice R. Johnson, Ph.D.; with 7 contributors.

Extensively rewritten and updated throughout, this new edition is a totally new book. It continues to give you a sophisticated review of the field — with some important differences:

- not only discusses general principles needed to understand how drugs can best be used, but re-emphasizes those concepts whenever they are specifically relevant to the class of drugs under consideration
- emphasis placed on prototypic drugs and on understanding the mechanisms by which they act
- other drugs in each class differentiated from the appropriate prototypes

- new information on:
  - converting enzyme inhibitors
  - brain and GI autacoids
  - leukotrienes and hydroperoxyeicosatetraenoic acids
  - flecainide and related newer antiarrhythmics
  - calcium channel blockers
  - steroid use in respiratory disease
  - lymphokines and monokines

February, 1988. Approx. 832 pages, 228 illustrations. (Book Code: 01167) About $36.95 (U.S.); $51.00 (Can.)
