The Department of Neurosurgery at the University of Mississippi Medical Center in Jackson, is seeking a full-time, academic research director. The position involves research and teaching of medical students and residents. Salary will be commensurate with training and expertise.

Interested applicants should send a curriculum vitae and references to:

Andrew D. Parent, M.D.
Professor and Chairman
Department of Neurosurgery
University of Mississippi Medical Center
2500 North State Street
Jackson, MS 39216-4505

The University of Mississippi Medical Center is an Equal Opportunity Employer, M/F/D/V.
**Volumetric Drinking Monitor**
Measures the amount of liquid consumed, in multiple cages, with 20 µL resolution.

**Animal Treadmills**
- **Enclosed Metabolic Treadmill** for VO2/VCO2 Measurements
  - Designed for measuring VO2/VCO2 during exercise; features a completely air tight enclosure, adjustable speed, inclination, and electric stimulus.
  - Accommodates 3 rats or 6 mice. Features adjustable inclination, speed and acceleration.
- **Open Treadmill** Exer 3/6

**Mazes**
- T
- Radial
- Barnes

**Oxymax Comprehensive Lab Animal Monitoring System (CLAMS)**
Developed in collaboration with The Jackson Laboratory, can measure up to 11 parameters including VO2/VCO2, Feeding, Drinking Volume, Activity, and Urine Production. All systems built custom to order.

**Measuring Coordination**
- **Rota Rod**
- **Foot Misplacement Apparatus**
  - Measurement of sensorimotor recovery after brain or spinal chord injury. Consists of a horizontally mounted ladder with a sensing/conditioning platform beneath. Counts number of missteps.
  - Used to test the motor performance, performance time, partial or complete ataxia, and motor coordination in laboratory animals. Features adjustable height and acceleration mode. Replaceable rods for rats and mice.

**Non Invasive Blood Pressure**
Measures systolic, diastolic, and mean blood pressure as well as heart rate of rats and mice. System works on the tail cuff method utilizing a sensor cuff and an occlusion cuff. Can measure 1 to 8 animals and the system includes software.

**Cardiac Output of Rats & Mice: Cardiomax III**
Measures cardiac output by thermodilution. The system also measures blood pressure and logs EKG. Suitable for animals ranging in size from mice to horses. Interfaces to PC.

**Invasive Blood Pressure**
Utilizes a blood pressure transducer to measure and display the systolic, diastolic, and mean blood pressure as well as heart rate.

**Precision Ventilator**
Interchangeable pistons that allow for more accurate ventilation volumes (0.1-100 ml). Pistons never require lubrication. The breath rate is adjustable (5-200 BPM) as is the inspiration/expiration ratio (4:1 to 1:4).

The easiest-to-use and most reproducible system for multiplexed soluble protein analysis is now available.

The new BD™ CBA Flex Sets with the BD FACSAArray™ bioanalyzer provide all the flexibility you need to build and customize the highest quality bead-based multiplex assays available. Using second generation technology, the new BD CBA Flex Sets are the easiest to use, provide more flexibility, and provide better performance than competitors products.

To upgrade the quality of your multiplexing experiments, contact your local BD Biosciences sales representative today, or for more information visit bdbiosciences.com/flexsets

With the BD CBA Flex Set System You Get:

- Simple no wash, one aspiration protocol
- Superior reproducibility versus competitor assays
- Reagents that are the easiest and most efficient to multiplex with no assay formulation regardless of plex size
- Quantitative results from a single, small-volume sample
- Automated sample acquisition and increased throughput with the plate-based BD FACSAArray bioanalyzer
- A complete system supported by the service and reliability you expect from BD Biosciences
