UP FRONT

Editorial: Publish or perish: letter to a young contributor 631-634
Book Review: Simon Hanft reviews Eve Herold’s Stem Cell Wars: Inside Stories From the Frontlines 635-637

HYPOTHESIS

E. J. Goetzl
Diverse pathways for nuclear signaling by G protein-coupled receptors and their ligands 638-642

LIFE SCIENCES FORUM

NASA—has its biological groundwork for a trip to Mars improved?
F. J. Haddy 643-646

RESEARCH COMMUNICATIONS

S. Goossens, B. Janssens, G. Vanpoucke, R. De Rycke, J. van Hengel, and F. van Roy
Truncated isoform of mouse αT-catenin is testis-restricted in expression and function 647-655

RNAi pathway is functional in peripheral nerve axons 656-670

Protein kinase C activity blocks neuropeptide Y-mediated inhibition of glutamate release and contributes to excitability of the hippocampus in status epilepticus 671-681

The evolutionally conserved activity of Dapper2 in antagonizing TGF-β signaling 682-690

T. Tohami, L. Drucker, H. Shapiro, J. Radnay, and M. Lishner
Overexpression of tetraspanins affects multiple myeloma cell survival and invasive potential 691-699

C. Wotzlaw, T. Otto, U. Berchner-Pfannschmidt, E. Metzen, H. Acker, and J. Fandrey
Optical analysis of the HIF-1 complex in living cells by FRET and FRAP 700-707

Multiple triggers of cell death in sepsis: death receptor and mitochondrial-mediated apoptosis 708-719

M. Oberholzer, G. Marti, M. Baresic, S. Kunz, A. Hemphill, and T. Seebeck
The Trypanosoma brucei cAMP phosphodiesterases TbrPDEB1 and TbrPDEB2: flagellar enzymes that are essential for parasite virulence 720-731

AHNAK, a novel component of the dysferlin protein complex, redistributes to the cytoplasm with dysferlin during skeletal muscle regeneration 732-742

(continued)
I. Shureiqi, X. Zuo, R. Broaddus, Y. Wu, B. Guan, J. S. Morris, and S. M. Lippman
The transcription factor GATA-6 is overexpressed in vivo and contributes to silencing 15-LOX-1 in vitro in human colon cancer 743-753

Analog of H2 relaxin exhibits antagonistic properties and impairs prostate tumor growth 754-765

The use of Raman microscopy to determine and localize vitamin E in biological samples 766-776

Molecular programming of endothelin-1 in HIV-infected brain: role of Tat in up-regulation of ET-1 and its inhibition by statins 777-789

Fabrication of 3D hepatic tissues by additive photopatterning of cellular hydrogels 790-801

L. Martini, M. Waldhoer, M. Pusch, V. Kharazia, J. Fong, J. H. Lee, C. Freissmuth, and J. L. Whistler
Ligand-induced down-regulation of the cannabinoid 1 receptor is mediated by the G-protein-coupled receptor-associated sorting protein GASP1 802-811

Reduced rather than enhanced cholinergic airway constriction in mice with ablation of the large conductance Ca\textsuperscript{2+}-activated K\textsuperscript{+} channel 812-822

J. M. Fitzpatrick, Y. Hirai, H. Hirai, and K. F. Hoffmann
Schistosome egg production is dependent upon the activities of two developmentally regulated tyrosinases 823-835

A novel subfamily of mouse cytosolic carboxypeptidases 836-850

Nna1-like proteins are active metallocarboxypeptidases of a new and diverse M14 subfamily 851-865

E. Louis, C. D. E. Boschi, G. J. Ortega, and E. Fernández
Role of transport performance for neuron cell morphology 866-871

Endoplasmic reticulum stress exacerbates ischemia-reperfusion-induced apoptosis through attenuation of Akt protein synthesis in human choriocarcinoma cells 872-884

C. Andriamampandry, O. Taleb, V. Kemmel, J.-P. Humbert, D. Aunis, and M. Maitre
Cloning and functional characterization of a gamma-hydroxybutyrate receptor identified in the human brain 885-895

P. Robinson, S. Lipscomb, L. C. Preston, E. Altin, H. Watkins, C. C. Ashley, and C. S. Redwood
Mutations in fast skeletal troponin I, troponin T, and \(\beta\)-tropomyosin that cause distal arthrogryposis all increase contractile function 896-905

H. Vacher, D. P. Mohapatra, H. Misonou, and J. S. Trimmer
Regulation of Kv1 channel trafficking by the mamba snake neurotoxin dendrotoxin K 906-914

Neuropilin-1 and neuropilin-2 enhance VEGF\textsubscript{121} stimulated signal transduction by the VEGFR-2 receptor 915-926

R. Carnevale, P. Pignatelli, L. Lenti, B. Buchetti, V. Sanguigni, S. Di Santo, and F. Violi
LDL are oxidatively modified by platelets via GP91\textsuperscript{phox} and accumulate in human monocytes 927-934

(continued)
Molecular regulation of the PAI-1 gene by hypoxia: contributions of Egr-1, HIF-1α, and C/EBPα

Nitric oxide activation of peroxisome proliferator-activated receptor gamma through a p38 MAPK signaling pathway

Cover Legend: “Arteries and Nerves of the Head and Neck,” an anatomical model in colored wax (circa 1818) by Carlo Calenzuoli (dates uncertain). Anatomic instructional models trace their ancestry to Gaetano Zumbo, a Sicilian sculptor and anatomist who was brought to Florence by the Grand Duke of Tuscany around 1690. Wax models soon replaced Zumbo’s wooden replicas, as anatomical discoveries made plasticity important. In Italy, surgeons and artists worked together in the “ceroplastica” (wax sculpture) laboratories of Bologna and Florence [Chen, C. T., Amar, A. P., Levy, M. L., and Apuzzo, M. L. J. (1999) The development of anatomic art and sciences: the ceroplastica anatomic models of La Specola. Neurosurgery 45, 883]. The wax anatomical teaching model reached its apogee in Italy at the end of the 18th and early 19th centuries. Some of the finest work has been preserved in the famous La Specola Collection in Florence (formed in 1775), but examples of ceroplastica may be found in many European collections, such as this one in the Muséum National d’Histoire Naturelle in Paris. (Photograph by Bernard Faye from an exhibition at Nancy, catalogue published as Changeux J-P “La Lumière au Siecle des Lumières & ajourd’hui” Odile Jacob Paris 2005. Printed with permission of Mme Van de Ponseele, Service Iconographique Bibliothèque du Musèum National d’Histoire Naturelle).
