In this issue:

- Androgen receptor gene
- Retinoids and their receptors
- Cellular desiccation and hydration
- Vomeromodulin
- Transgenic animals in biomedical research
- Signal transduction in erythropoiesis
TIME-RELEASE PELLETS...

ALWAYS ON TIME.

Why in the world should anyone engage in laborious drug injections? It is not necessary because a long term implantable/removable time release product is available from Innovative Research of America.

We offer biomedical scientists the proven pellet delivery system that releases the active product in the animal continuously for 21 days, 60 days, or even 90 days. The system eliminates variables, spares the animal stress and trauma and allows for reproducible results.

Our stock items include many sizes and dosages of ready-to-implant Progestins, Androgens, Estrogens, Corticoids, Thyroids, Cardiacs, Anti-neoplastics, Anti-inflammatory, Prostaglandins, and more.

For more information and catalog, please write:

WHY DO MORE SCIENTISTS CHOOSE FJ

FJ is the most comprehensive source of advances in the biomedical and biological sciences.
FJ is ranked #1 by Impact Factor in the Biology journals category of the Science Citation Index.
FJ is a library in itself – more reviews than any other biology journal.

A peer-reviewed journal you can rely on for timely information.
Just think, we once used leeches to draw blood, whiskey to sterile wounds and Freund’s to produce antibodies.

Introducing TiterMax™, an immunoadjuvant that produces higher titers than Freund’s without the toxicity.

For years, researchers had no choice but to use Freund’s despite its toxicity problems. No alternative existed which could equal its ability to produce high titers without the toxicity. But today, there’s no excuse to use Freund’s.

We’ve developed a replacement for Freund’s that gives you higher titers to most antigens and low toxicity. It’s called TiterMax™, and it’s the product of more than 20 years of intensive adjuvant research.

Tests conducted with mice, rabbits, guinea pigs and rats prove that TiterMax produces higher antibody titers in less time than Freund’s. In fact, it’s so effective, boosting can be eliminated. And it contains no mycobacterium or mineral oil which contribute to the toxicity of Freund’s.

TiterMax also emulsifies faster than other adjuvants. So, it’s reliable and easy to use. Getting more information is easy, too. Just call our toll-free number from 8 a.m. to 5:30 p.m. (EST) and our TiterMax team will answer your questions or send you more information.

and discover new solutions
to your bioanalysis problems

Gel Electrophoresis

Electroelutor/minigel apparatus:
Little Blue Tank
recovers proteins
and DNA quickly
from gels and other
sample matrices. As
a running apparatus, it also
separates your DNA samples in a
convenient 10 x 9 cm minigel format.

Power supplies: Isco quality
power supplies put an end
to problems of safety, reliability, and
reproducibility.

Capillary Electrophoresis

CE is a powerful new
tool for separation
and analysis of pro-
teins, peptides, or-
ganic acids, nucleo-
tides, and other
sample mixtures.
Isco's two CE systems give you femto-
mole detection sensitivity with nanoliter samples.
One system is automated
with computer data
management; the other is
a compact, affordable
"personal CE".

Low-pressure LC

Compact LC systems give you
big capacity and features in a
small bench space. Frac-
tionate your proteins by
time, drop count, or
peak shape. Solve
difficult separation
problems with
optional gradient
programming. Scale
up easily to liter/min
flow rates. And
forget about
lost samples
and coldroom
troubles.

HPLC

Robust, reliable HPLC systems give you modular
flexibility and programmability at a fair price—
so you can still get great HPLC value even on a
tight budget. And for prep chromatography, a
Foxy® 200 programmable fraction collector will
always get the most out of your LC system.

Call toll-free today for your copy of
our big, 120-page catalog.

The American Heart Association invites you to telefax your journal order directly to us. Your personal subscription will be processed quickly and delivery will be dependable. Institutional rates are available on request.

Please check the boxes on the right for the journals you wish to receive. Overseas issues are sent by air-expedited service. US copies are sent by the United States Postal Service.

This form is designed to be telefaxed. If you prefer to mail your order, simply complete the fax-form and mail it to:

American Heart Association  
Scientific Publishing  
7320 Greenville Avenue  
Dallas, TX 75231-4599  
USA

Telephone your order by calling:  
1 (214) 706-1310

Charge your subscription to a credit card or send a check directly to the AHA. Advance payment is required.

* For rate information in Japan, contact Nankodo Co. Ltd., 42-6 Hongo 3-chome, Bunkyo-ku Tokyo-113 Japan  
Fax 03-811-5031

**ALKO Rapid Freezing Biopsy Drill (Heart)**

- Model 950H - Heart
- Uniquely cuts and freezes tissues instantly
- Cooling container has double wall construction
- Replaceable drill sizes: 2mm/3mm/4mm
- No electrical components

**ALKO Rapid Freezing Biopsy Drill (Brain)**

- Model 950B - Brain
- Biopsies cut and frozen instantly
- Sample travels less than 3" from cutting to freezing
- Straight path for tissue travel
- Minimized sample distortion

**ALKO Renal Artery Clamps**

- Model 1933 Size: 0 - 4 mm opening
- Used on dogs and larger research animals
- Manufactured from 304 stainless steel
- Microscopically burr-free

- Model 1934 (minimum) Size: 0 - 2 mm opening
- Used on mice, rats and other small animals
- Manufactured from medical grade polyethylene for light weight and firm clamping action

---

**CANNULATE SMALL ANIMALS IN SECONDS**

- Cannulate the arteries and veins of rats, hamsters, mice and other small animals in seconds.
- Inject tiny amounts of expensive radiolabeled compounds, or monoclonal antibodies, _intra-arterially_ into the rodent brain, or to the heart, liver, kidney, or GI tract—_MANY TIMES MORE EFFECTIVE THAN INJECTING I.P._
- Infuse drugs directly into the circulation.
- Measure pressure in the rat femoral artery without compromising blood flow to the brain.

General Policy: IN VIVO is a multi-disciplinary journal designed to bring together original high-quality works and reviews on biomedical research involving experimental animals. Articles are drawn from scientific areas including oncoloy, pharmacology, chemotherapy, immunology, radiology, toxicology, genetics, cytology, endocrinology, nutrition. The principal aim of IN VIVO is to provide for the prompt publication of accepted articles, generally within 1-2 months from final acceptance.

Publication Data: IN VIVO is published bimonthly. Each annual volume contains six issues. Annual Authors and Subject Indexes are included in the sixth issue of each volume.

Manuscripts should be submitted to: Dr. J.G. Dellinassios, Managing Editor, IN VIVO, Editorial Office, 5 Argyropoulou Street, Kato Patisia, Athens GR 111 45, Greece.

Articles in IN VIVO are regularly indexed in bibliographic services, including Biological Abstracts, Chemical Abstracts, BIOSIS, Excerpta Medica, CABS Database, CANCERLIT Database, SUBIS, Reference Update-RIS.

Special Offer: The first author of each accepted article will be entitled to a free one-year subscription to the journal.

Editorial Office: 5 Argyropoulou Street, Kato Patisia, Athens, GR-111 45, Greece. Telephone and Fax 2016380.
INTRODUCING THE DNA THERMAL CYCLER 480.

More efficient amplification in less time and with less reagents. The new DNA Thermal Cycler 480 System, with our GeneAmp® Reagents and optimized two-temperature PCR protocol, gives you enhanced performance every day, on every sample. All backed by the Perkin-Elmer Cetus PCR Performance Guarantee. A commitment that brings you the expertise and resources of the industry leader.

The DNA Thermal Cycler 480. Continuing the DNA Thermal Cycler's standards of quality and excellence. For technical information and to order either system in the U.S., contact your local Perkin-Elmer sales representative or call 1-800-762-4001. For literature in the U.S., call 1-800-762-4000. Outside the U.S., contact your local Perkin-Elmer sales representative.
Features...

Author Search. Powerful sort lists all articles by particular author.

Article Search. Display abstracts, authors, full bibliographic citations and more.

Word and Subject Search. Using Boolean search and wildcards enables a user to fine tune to the appropriate article.

Table of Contents. Browse through the contents of an issue instantly.

Graphics Display. Referenced figures appear in full color and as large as your screen permits.

Benefits...

Convenient. The equivalent of 25,000 pages mailed to you in quarterly updates.

Powerful. The ability to access the entire Journal right from the desktop.

Easy. The menu driven instructions are in plain English—there is no need for special codes to input or remember.

Complementary. Your subscription to both gives you the immediacy of the bound copy with state-of-the-art archiving ability.

A Portable and Compact Library. An entire year of the Journal, an equivalent of three feet of shelf space, is contained on four small compact disks.

The 1992 Volume, published quarterly, is only $45 per year when accessioned with subscription to the published Journal.
