2-D GEL ELECTROPHORESIS AND MICROSEQUENCING

In this issue:
- Non-insulin-dependent diabetes
- Trafficking of insulin receptor
- n-3 Polyunsaturated fatty acid effects
- Matrix metalloproteinases
- G protein-coupled ion channel pathways
- RNA minihelices

Volume 5, Number 8  May 1991
TIME-RELEASE PELLETS...

ALWAYS ON TIME.

Why in the world should anyone engage in laborious drug injections? It is not necessary because a long term implantable/removable time release product is available from Innovative Research of America.

We offer biomedical scientists the proven pellet delivery system that releases the active product in the animal continuously for 21 days, 60 days, or even 90 days. The system eliminates variables, spares the animal stress and trauma and allows for reproducible results.

Our stock items include many sizes and dosages of ready-to-implant Progestins, Androgens, Estrogens, Corticoids, Thyroids, Cardiacs, Anti-neoplastics, Anti-inflammatory, Prostaglandins, and more.

For more information and catalog, please write:

XENOPUS
OOCYTE MICROINJECTION WORKSTATION

• Up to 1000 oocyte injections per day
• Injection volumes from 3-250 nl
• Positive confirmation of each injection
• Complete ready-to-use system
• Supplied with dissecting microscope

Attocyté provides an integrated solution for Xenopus oocyte micro-injection. A computer controlled delivery system insures accuracy, speed, reproducibility, and ease of operation.

AUTOMATED CYCLIC AMP AND GMP RIA

• Hands-off method for cAMP and cGMP
• Assays 60 samples per hour
• First results available in 6 minutes
• More reproducible than manual method
• Eliminates need for costly RIA kits

Attoflo performs the complete assay: pipeting of samples, addition of isotope and antibody, incubation, separation of free from bound radioligand, counting of bound radioligand, and calculations - all automatically without user intervention.
Two out of three lab animals surveyed prefer MIKRO-TIP* catheter transducers.

- High fidelity pressure measurement at the source
- No artifact or damping of pressure signal
- Low cost per use — advanced sensor design for maximum durability
- Easy-to-use, inexpensive interface units let you use existing recording/monitoring equipment
- Flexible catheter material

SPR-407 ultraminiature sensor
Millar's new sensor technology delivers a sensor smaller than ever before! Ultraminiature 2F (22 gauge) pressure sensor and 1.5F flexible nylon catheter minimally obstruct small vessels and valves.

SPR-477 needle-tip sensor
This needle-tip transducer was designed for pressure measurement within the myocardium of animals by direct insertion into the muscle tissue. The pressure sensor is immediately proximal to the beveled tip; the length of the needle shaft allows insertion into various depths of the muscle tissue or body cavities.

Watch for it in The FASEB Journal
Our new Electronic Notebook is added proof that ELAMS is more than a superior animal identification process.

ELAMS is dramatically impacting data collection efficiency, accuracy, quantity and use. The new BioMedic Data Systems DAS4002, an entirely portable variation and complement to the DAS4001, underscores the acceptance of ELAMS by the research field.

So, what began as a big step ahead in animal identification is turning into a great leap forward in lab animal monitoring and information management.

Why? Because ELAMS does so many things so much better, faster, cleaner, safer and more cost efficiently.

Invaluable Positive Identification

Start with the identification process. Using encoded, subcutaneously implanted microchips (transponders) that are 'read' by an interrogating scanner, ELAMS positive identification renders obsolete the hit-and-miss of tagging, clipping, tattooing, etc. And you can keep and use your present animal codes and read about 100 animals in 20 minutes. It works for all animal species. ELAMS uses patented bio-compatible glass-encased transponders, pre-encoded and conveniently packaged within individual sterile needles, inside an insertion device. Studies and customer usage confirm that animal tissue response is completely non-adverse. ELAMS exceeds GLP guidelines.

Secondly, ELAMS provides you with transportable, programmable memory, extending up to 15,000 ID codes on a credit-card sized device. Data can be copied from card to card, or downloaded
its evolution is quite natural.
Membership in the Federation of American Societies for Experimental Biology and in Its Constituent Societies

Membership in the Federation is limited to societies; there is no individual membership. Any society in the field of biological science may apply for membership, either corporate or affiliate, and may be admitted by a three-fourths majority vote of all members of the Federation Board. The societies listed below presently constitute the Federation.

Since requirements and procedures for election to membership in the member societies vary, the following information is provided:

Corporate Members

**The American Physiological Society.** Individuals who qualify for Regular and Corresponding membership should have a doctoral degree in physiology or related area and have published several papers in refereed journals. They should have a position other than as a trainee in physiological research, teaching, administration, or related area. Applicants considered for Associate and Associate Corresponding membership should have a doctoral degree in physiology or a related area and are engaged in research and/or in the teaching of physiology. Any student conducting physiological research leading to an advanced degree in physiology or in a related area may qualify as a Student member. Two Regular members must sponsor a candidate for membership. A Corresponding or Honorary member of the Society may substitute for one of the Regular members in sponsoring a candidate for Corresponding or Associate Corresponding membership. Council nominates candidates for Regular and Corresponding membership who stand for election by the vote of Regular members of the Society. Associate, Associate Corresponding, and Student membership applicants are accepted upon approval of the Executive Director of the Society. Other classes of membership include Honorary, Emeritus, and Sustaining Associate. 

Further information and application forms are printed in the August issue of *THE PHYSIOLOGIST* and are available from the APS Membership Services Department, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**American Society for Biochemistry and Molecular Biology.** Investigators residing in the Americas who have demonstrated the ability to conduct meritorious research in biochemistry and molecular biology are eligible for Regular membership. Evidence of such qualification may be shown by publication or at least one paper in a refereed journal which primarily publishes reports of biochemistry and molecular biology. Nominations must be submitted by two Regular members of the Society and, if favorably recommended to the Council by the membership Committee, will be elected at any regular meeting of the Society. Individuals not yet fulfilling the requirements of Regular membership, but having an interest in biochemistry and molecular biology are eligible for Associate membership. Such individuals must be nominated by two Regular members of the Society and will become members immediately on nomination. Eminent biochemists residing in countries other than the Americas may be nominated for Honorary membership. Individuals not otherwise eligible for any type of membership, but who have made significant contributions through service to biochemistry or molecular biology are eligible for designation as a Distinguished Service Associate. Nomination forms and specific nomination criteria may be obtained from ASBMB Membership Secretary, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**American Society for Pharmacology and Experimental Therapeutics.** Any qualified investigator who has conducted and published a meritorious original investigation in pharmacology and is a legal resident of the United States, its dependencies, Canada, or Mexico shall be eligible for Regular membership in the Society. Nominees for membership shall be proposed by two members of the Society who are not members of the Council or of the Membership Committee at the time of the initial nomination. Other classes of membership include Affiliate and Student/Fellow, which are for pharmacologists who are either residents of a country other than the USA, Canada or Mexico, are not now active in research, or who are advanced students or are fewer than 5 years past their doctoral degree. 

Nomination forms are printed in *The Pharmacologist* and are available from Mrs. Kay A. Croker, Executive Officer, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**American Association of Pathologists.** Successful candidates for membership in the AAP are independent investigators with solid scientific qualifications, commitment and continuing productivity in experimental pathology or related disciplines. Not all members are pathologists, but are investigators with a strong interest in the pathogenesis and diagnosis of disease. Candidates are nominated by at least two members of the Association for approval by the Council and a majority of members attending the annual AAP Business Meeting. Nominations for Trainee membership (residents or fellows) are accepted from AAP members who can certify the training status of the nominee. Additional information and application forms may be obtained from Dr. Frances A. Pittlick, Executive Officer, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**American Institute of Nutrition.** Any person who has conducted and published meritorious original investigations in some phase of nutrition and who is professionally active in the field of nutrition shall be eligible for Active membership. Persons rendering superior service to nutrition through teaching, administration, or technical service may also be deemed eligible. Nominees shall be sponsored by two members of the Institute. Nominations should be received by February 1, and those nominations approved by Council will be presented for election at the annual business meeting. Other classes of individual membership include Associate, Emeritus, and Student. Membership in the American Society for Clinical Nutrition, the Clinical Division of the AIN, is based on professional activities in the area of clinical nutrition. All nominees for ASCN membership must be members of AIN or be considered for election simultaneously. 

AIN/ASCN nomination forms are available from the AIN Secretariat, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**The American Association of Immunologists.** Investigators qualified by virtue of a doctorate degree or equivalent experience and training who have conducted and published meritorious original investigations in immunology or related disciplines are eligible for membership. Candidates must be nominated by two members of the Association. The recommendations of a membership committee are submitted for election by the membership at the annual spring meeting. For application forms write to Dr. Joseph F. Saunders, Executive Director, 9650 Rockville Pike, Bethesda, MD 20814, USA.

**Affiliate Member**

**The American Society for Cell Biology.** To be considered for Regular membership, an applicant must hold the Ph.D. or equivalent degree or have equivalent experience, and be sponsored by two Regular or Emeritus members. Other classes of membership are Emeritus and Student. Further information and forms may be obtained from Ms Dorothea C. Wilson, Executive Officer, 9650 Rockville Pike, Bethesda, MD 20814, USA.

Revised August 1990
